Concussion Vital Signs Announces Lifetime Free Testing for All Customers Registered as of July 1, 2020

Since 2015, schools, colleges and universities, all physicians, and qualified providers have been able to administer Concussion Vital Signs baseline tests, as well as post-injury tests at no cost.

Concussion Vital Signs (www.concussionvitalsigns.com), an online neurocognitive testing platform designed to integrate baseline and post injury cognitive testing with concussion management protocols, announced today it will continue to offer ongoing free use of Concussion Vital Signs to any physician or healthcare provider supporting schools, colleges or universities registered as of July 1, 2020.

"With this announcement we will clear up rumors and misinformation floating around," stated Alan Boyd CEO of CNS Vital Signs, the developer of Concussion Vital Signs. "Any school, college university or provider supporting these institutions having registered before July 1 2020 will continue to enjoy "no cost" use of the Concussion Vital Signs platform. Any entities registering after July 1, 2020 will be charged a nominal fee each year."

"Since 2015, it has been our goal to democratize concussion testing such that the zip code in which an athlete resides, or budgetary constraints of the school system will not prevent athletes from being baselined and subsequently retested if needed. Again, we hope our contribution elevates awareness, as well as enhances the safety of all student athletes and allows schools to free up funds for other necessary equipment. Since 2015, we have fostered an environment with no financial impediment to baseline test each and every athlete." stated Boyd.

About CNS Vital Signs: CNS Vital Signs is a leading provider of computerized neurological and psychological testing throughout the world. Products include CNS Vital Signs, Concussion Vital Signs and Cognitrax. The applications support a diverse set of customers worldwide, spanning academic and pharmaceutical research to private practice. The company offers its tools in both web and local running formats allowing testing in any computerized environment. For more information, please visit www.CNSVS.com.
